Implementation Plan against Assessment Team (AT) Finding during PREE Cycle 2025-26 (MS Biotechnology)

Sr. No.	Assessment Team Findings and Recommendations	Intended Corrective Actions	Intended Implementation Period	Responsible Body	Resources Needed
1.	The department has a critical imbalance in its faculty structure, consisting only of one Professor and four Lecturers, with no Associate or Assistant Professors. This creates a missing academic middle tier, which is essential for mentorship, research supervision, and academic continuity. The absence of mid-level faculty significantly weakens the MS program, particularly in terms of advanced teaching, research guidance, and long-term academic development.	Recruitment of Associate and Assistant Professors to cover academic middle tier.	Within 6–12 months	University Management / HR Department	Budget allocation, HEC guidelines
2.	MS Biotechnology demands sophisticated lab facilities, molecular biology tools, and specialized equipment for research. However, inadequate laboratory space, instruments, and consumables restrict students' ability to	Upgradation of lab infrastructure, procurement of advanced equipment, allocation of consumables budget, and establishment of research collaborations	6–12 months (ongoing for consumables & collaborations)	University Administration / ORIC / HOD	Development budget, recurring funds, MoUs

	conduct meaningful thesis-level experiments.				
3.	There is no dedicated or sufficient budget allocation for MS-level research projects, including chemicals, reagents, and experimental materials. Without consistent funding, students are unable to design or complete high-quality experimental research, leading to theoretical or low-impact theses.	Allocation of dedicated MS research budget, provision of funds for chemicals/reagents/consumables, and facilitation of external research grants and industry linkages	Immediate & ongoing	University Administration / Finance Department / ORIC / HOD	Recurring budget, grant funding, industry support
4.	MS students require training in modern techniques such as gene expression analysis, bioinformatics, proteomics, and molecular diagnostics. However, due to infrastructure and expertise limitations, students are not adequately exposed to advanced tools and technologies required for competitive research careers.	Organization of hands-on training workshops, faculty capacity building, hiring of experts/visiting trainers, and development of collaborations for advanced techniques exposure	3–12 months (ongoing)	Department / ORIC / University Administration	Training funds, expert honorarium, software/tools, collaboration MoUs
5.	There is no clearly structured system to regularly monitor MS thesis progress, including proposal approval timelines, milestone tracking, and defense preparation. This affects research timelines, delays completion, and reduces the overall efficiency of the MS program.	Development of structured MS thesis monitoring system including defined timelines, milestone tracking, regular progress reviews, and standardized defense procedures	ongoing implementation	Department / Graduate Committee / QEC	Director Academics Administrative support, monitoring tools, policy guidelines

6.	The students have limited access to external labs, research institutes, and industry collaborations. This restricts opportunities for joint research, internships, and exposure to real-world biotechnological applications, weakening graduate employability and research relevance.	Establishment of MoUs with research institutes/industry, facilitation of internships and joint research projects, and strengthening external lab access for students	3–9 months (ongoing)	Department / ORIC / University Administration	Collaboration agreements, coordination support, internship facilitation resources
HoD/Chairperson Signatures: 		Comments (if any): The observations of the assessment team are acknowledged. The department recognizes the gaps in faculty structure, laboratory facilities, research funding, advanced training, thesis monitoring, and external collaborations. A comprehensive improvement plan has been initiated, including faculty hiring and development, infrastructure upgradation, dedicated research funding, capacity building in modern techniques, structured thesis monitoring mechanisms, and strengthening of industry and research linkages. These measures will be implemented in a phased manner to ensure the quality and sustainability of the MS Biotechnology program.

Implementation Plan against Assessment Team (AT) Finding during PRE Cycle 2025-26 (MS Chemistry)

Sr. No.	Assessment Team Findings and Recommendations	Intended Corrective Actions	Intended Implementation Period	Responsible Body	Resources Needed
1	The MS Chemistry program requires additional faculty members as students progress into advanced research semesters. The current limited faculty strength restricts proper supervision of MS research projects and increases workload pressure. Recruitment of specialists in Organic and Analytical Chemistry is essential to strengthen research guidance, improve thesis quality, and ensure academic sustainability at the postgraduate level.	The Department of Chemistry will request the recruitment of additional faculty members in accordance with the increasing student enrollment. Priority will be given to hiring qualified specialists in Organic Chemistry and Analytical Chemistry to strengthen subject expertise, improve teaching quality, and enhance laboratory-based learning.	Short Term (3–6 months): Submission of recruitment proposal and approval process. Medium Term (6–12 months): Advertisement and hiring of faculty members.	Head, Department of Chemistry in coordination with the HR, Registrar Office and University Administration.	New Appointments

2	Faculty members are heavily engaged in administrative duties due to the absence of dedicated administrative staff in the department. This dual responsibility reduces their capacity for effective MS-level teaching, research supervision, and publication activities.	The Department of Chemistry will request the University administration to provide dedicated administrative support staff to assist with routine departmental and university affairs, including student records, correspondence, documentation, scheduling, and coordination of academic activities. This will enable faculty members to devote more time to teaching, research, and student supervision.	Short Term (3-6 months): Submission of proposal for administrative support staff. Medium Term (6-12 months): Appointment or deputation of administrative personnel.	Registrar Office and Human Resource Section.	New Appointments
3	The program lacks a fully equipped dedicated research laboratory with advanced instrumentation such as FTIR, Mass Spectrometry, XRD, and potentiostat systems etc. Existing laboratory facilities are inadequate for high-level MS research work.	Funding will be sought through the University, the Higher Education Commission (HEC), research grants, and collaborative projects. The department will also establish an equipment maintenance and calibration system and train faculty and laboratory staff in the operation and maintenance of advanced instruments.	Expand the research laboratory with additional advanced instrumentation, establish collaborative research facilities, and ensure regular maintenance and calibration of equipment.	Department of Chemistry, in coordination with the ORIC, Planning & Development (P&D) Section, Store & Purchase Department, Finance Office, and University Administration.	

	The university provides insufficient teaching, research, and digital learning resources, including computer laboratory facilities and online academic tools. This restricts MS students' access to modern computational chemistry software and research databases.	The Department will submit a proposal to the University administration for the enhancement of teaching and research resources. This includes upgrading the computer laboratory with modern computer systems, improving internet connectivity, and providing access to online academic resources such as digital libraries, scientific databases, plagiarism detection software, and licensed educational software.	Medium Term (6–12 months): Upgrade the computer laboratory, improve internet facilities, and subscribe to essential academic databases and software. Long Term (12–24 months): Regularly update digital resources, maintain ICT infrastructure, and provide training to faculty and students on the effective use of online academic tools.	Head, Department of Chemistry, in coordination with the IT Department, Library, ORIC, Registrar Office, and Finance Office.	
--	---	---	---	--	--

The absence of hostel facilities for students, faculty, and staff creates significant accommodation challenges. 5 Adequate residential facilities are necessary to support research continuity and ensure a stable academic environment for MS-level studies.	The Department of Chemistry recommends that the University administration prioritize the development of hostel facilities for students, faculty, and officers as part of its infrastructure expansion plan.	Medium Term (6–18 months): Allocate budget, identify suitable land or buildings, and initiate the construction or procurement process. Long Term (18–36 months): Complete the construction and operationalize the hostel facilities.	University Administration, Registrar Office, Planning & Development (P&D) Section, and Finance Office.	Availability in Budget
CLOs and PLOs require improved systematic mapping and stronger alignment with regional and applied chemistry issues, such as water quality (TDS analysis). Although the program follows HEC standards, it lacks sufficient contextual integration with local environmental and industrial needs. Enhancing curriculum relevance would improve research applicability and societal impact. 6	The Department of Chemistry will review and revise the curriculum to strengthen the alignment of CLOs and PLOs with Program Educational Objectives (PEOs), HEC Undergraduate Education Policy, and National Qualifications Framework (NQF). Greater emphasis will be placed on incorporating regional environmental and industrial issues into course content, laboratory experiments, student projects, and research activities.	6–12 months	Department of Chemistry, in coordination with the Quality Enhancement Cell (QEC), Board of Studies (BoS), Curriculum Committee, and Faculty Members.	

7	There is limited integration of research activities with real-world applications, such as environmental problem-solving and industry collaboration. Establishing industry-linked research and internship programs would enhance student exposure and improve practical research outcomes.	Memoranda of Understanding (MoUs) will be established with relevant organizations to facilitate student internships, joint research projects, industrial visits, and guest lectures. Students will be encouraged to undertake research projects addressing local environmental, industrial, and societal challenges, such as water quality assessment, waste management, pollution monitoring, and materials development.	6-12 months	Department of Chemistry, in coordination with the Office of Research, Innovation and Commercialization (ORIC), Career Development Office, Quality Enhancement Cell (QEC), and University Administration.	
8	The program currently lacks formal paid internship schemes and structured research development opportunities for MS students.	Efforts will also be made to secure research assistantships, paid internships through externally funded projects, and scholarships from HEC, industry, and other funding agencies.	12-24 months	Department of Chemistry, in coordination with the Office of Research, Innovation and Commercialization (ORIC), Career Development Office, Quality Enhancement Cell (QEC), and University Administration.

Implementation Plan against Assessment Team (AT) Finding during PREE Cycle 2025-26 (MS Microbiology)

Sr. No.	Assessment Team Findings and Recommendations	Intended Corrective Actions	Intended Implementation Period	Responsible Body	Resources Needed
1.	The department lacks full-time faculty members, consisting only of one Assistant Professor and One Lecturer, with no Associate or Professors. There is a need to hire new faculty members. The absence of mid-level faculty significantly weakens the MS program, particularly in terms of advanced teaching, research guidance, and long-term academic development.	We appreciate your valuable input however, hiring of faculty is under process	06-09 Months	Registrar Office	Resources are available
2.	MS Microbiology demands sophisticated lab facilities, and specialized equipment for research. However, inadequate laboratory space, instruments, and consumables restrict students' ability to conduct meaningful thesis-level experiments.	We have adequate infrastructure and well-equipped lab to meet the current requirements however, Demand for additional requirement of chemicals and consumable is already under process	6-months	Purchase & store	Resources are available

3.	There is no dedicated or sufficient budget allocation for MS-level research projects, including chemicals, reagents, and experimental materials.	We highly appreciate your direction, and forwarding Request for Dedicated budget Allocation is under consideration	6-months	Treasurer office	Resources will be made available
4.	The university provides insufficient teaching, research, and digital learning resources, including computer laboratory facilities and online academic tools.	University Administration has upgraded computing facilities and further upgrading the facilities as well	6- months	Admin	Resources are available
5.	There is no clearly structured system to regularly monitor MS thesis progress, including proposal approval timelines, milestone tracking, and defense preparation. This affects research timelines, delays completion, and reduces the overall efficiency of the MS program.	Revised rules and policies to monitor MS thesis progress will be approved in the upcoming Academic council meeting.	6 months	Academics	Resources will be made available
6.	The students have limited access to external labs, research institutes, and industry collaborations. This restricts opportunities for joint research, internships, and exposure to real-world applications, weakening graduate employability and research relevance.	Department has already built synergies with other departments outside university and is also trying to develop more in future.	6-12 months	Department itself	Resources will be made available

7.	There is limited integration of research activities with real-world applications, such as environmental problem-solving and industry collaboration. Establishing industry-linked research and internship programs would enhance student exposure and improve practical research outcomes.	We appreciate the comment in general, but the department has already worked on the real-world applications, such as environmental problem-solving, medical and industry collaboration and we intend to develop more.	1-2 years	Department itself	Resources will be made available

Implementation Plan against Assessment Team (AT) Finding during PREE Cycle 2025-26 (MS T&HM)

Sr. No.	Assessment Team Findings and Recommendations	Intended Corrective Actions	Intended Implementation Period	Responsible Body	Resources Needed
1.	The department has a critical imbalance in its faculty structure, consisting only of one Associate Professor and two Lecturers, with no Professor or Assistant Professors. This creates a missing academic middle tier, which is essential for mentorship, research supervision, and academic continuity. The absence of mid-level faculty significantly weakens the MS program, particularly in terms of advanced teaching, research guidance, and long-term academic development.	One faculty member has successfully completed her PhD, and her official notification is expected to be issued in the coming month that shall address the eligibility issue of department to offer MS. In addition, University intends to hire new faculty including Assistant Professor. These developments will help strengthen department's faculty structure and enhance the quality of MS program.	On year	Registrar office	Administrative decision to recruit the faculty depending upon availability of budget.
2.	The department faces significant shortages in essential academic infrastructure, including a departmental library, licensed software, and access to modern digital learning tools such as LMS and Turnitin.	The University currently provides institutional access to Turnitin to support academic integrity and research activities. The establishment of a departmental library, procurement of licensed software, and implementation of a dedicated	One year	Library, Chairperson, honorable vice chancellor for administrative approvals	Administrative decision to provide funds for the purchase of software, purchase of new books and establishing mock reception of hotel.

		Learning Management System (LMS) for the department are planned as part of future development initiatives. These measures will strengthen the teaching, learning, and research environment of the program.			
3.	There is no clearly structured system to regularly monitor MS thesis progress, including proposal approval timelines, milestone tracking, and defense preparation. This affects research timelines, delays completion, and reduces the overall efficiency of the MS program..	MS thesis program already follows a clearly defined timeline for proposal approval, progress reviews, and thesis defense. However, department acknowledges that more structured and systematic mechanism for monitoring research progress is needed. Efforts are underway to strengthen milestone tracking and ensure timely completion of research	6 months	QEC and Academics section along with Departmental Research Review Committee	Administrative decisions
4.	Faculty development mechanisms are limited, with no documented Continuous Professional Development (CPD) plan, incentive system, or clear promotion pathway.	University encourages faculty development through participation in training programs, workshops, seminars, conferences, and related opportunities. The department is in process of developing a documented Continuous Professional Development (CPD) plan, along with structured career progression framework. These measures will strengthen faculty development and support academic excellence.	One year	ORIC, QEC, Academics, Chairperson	Funds for such trainings and administrative approvals

5.	The students have limited access to research institutes, and industry collaborations. This restricts opportunities for joint research, internships, and exposure to real-world applications, weakening graduate employability and research relevance	The department recognizes the need to strengthen linkages with research institutes and industry partners. Efforts are underway to establish formal collaborations through MoUs, internships, guest lectures, and joint research activities. These initiatives will enhance students' practical exposure, employability, and the relevance of their research.	On year	Chairperson, ORIC	Allocation of dedicated Funds for such visits
6.	The curriculum lacks systematic documentation, particularly in relation to CLO (Course Learning Outcomes) and PLO (Program Learning Outcomes) mapping. There are no clear revision protocols or structured mechanisms for incorporating stakeholder feedback into curriculum updates.	The department will develop systematic documentation for CLO–PLO mapping in accordance with Outcome-Based Education (OBE) requirements. Formal curriculum revision protocols and structured mechanisms for incorporating feedback from students, alumni, employers, and academic experts will be established through the Board of Studies. These measures will ensure continuous curriculum review and improvement.	2 years	Chairperson through BoS and relevant bodies	Administrative guidelines from academics
HoD/Chairperson Signatures: 		Comments (if any): the Department highly appreciates the indepth review of the existing programs by the team and acknowledges the points raised to improve the quality of education. We are fully committed to improve upon the highlighted shortcomings and shall render full attention to address them in due time.
