Quality Enhancement Cell (QEC)

PREE Compliance Report BS MLT Program (Department of Biotechnology)

Sr. No.	AT findings and recommendations	Intended Corrective Actions	Intended Implementation Period	Responsible Body	Compliance/ Pending
1	Misalignment of Program Vision and Mission Finding: The BS-MLT program's vision and mission are not fully aligned with the Department of Allied Health Sciences or Kohsar University's institutional vision. This disconnect may result in fragmented academic planning and hinder the program's ability to contribute cohesively to the university's strategic objectives. Recommendation: Conduct a structured review involving program leadership, departmental committees, and QEC to revise and harmonize the vision and mission statements. These should clearly reflect the biomedical focus, societal service mandate, and professional standards required under AHPC guidelines.	Revise BS-MLT vision and mission statements in consultation with departmental, QEC, and university authorities to align with institutional mission and AHPC standards; approve through BOS	Tentative period for BOS meeting schedule depends on approvals from the higher authority of KUM	Department	In the 3 rd BoS meeting after PREE meeting, The BS-MLT program's vision and mission is now fully aligned with the Department and Kohsar University's institutional vision and mission.
2	Program objectives lack biomedical relevance and research/industry linkage. Finding: The current BS-MLT program objectives do not adequately emphasize the	Review and revise program objectives to include biomedical focus, ethical practice, research engagement, and industry	BOS approval We will identify potential partners and actively pursue new MoUs.	Department/ ORIC	In 3rd BoS meeting, In compliance with the recommendation, the Program Objectives of BS-

	biomedical focus, research engagement, or industry linkage essential for producing competent and practice-ready graduates. This gap results in limited exposure to scientific inquiry, innovation, and real-world diagnostic laboratory challenges, thereby constraining graduate employability and sectoral contribution. Recommendation: Revise the program objectives through a consultative process involving faculty, QEC, and industry partners to embed biomedical relevance, ethical practice, critical thinking, and applied research skills. Integrate structured research components and formal industry collaborations into the curriculum to align with AHPC standards and contemporary healthcare demands.	collaboration in compliance with AHPC requirements.			MLT have been revised through consultative meetings involving departmental faculty and relevant stakeholders. Biomedical relevance, ethical laboratory practice, critical thinking, applied research skills, and industry linkage have now been explicitly incorporated into the revised objectives.
3	MLT embedded under Biotechnology department contrary to AHPC standards. Finding: The BS-MLT program is currently housed under the Biotechnology department, which conflicts with AHPC standards requiring MLT to function as an independent academic unit. This structural arrangement dilutes the program's professional identity, limits subject-specific governance, and risks non-compliance with accreditation criteria, ultimately affecting the program's credibility and student outcomes. Recommendation: Establish the BS-MLT	We are planning to take approvals from higher authority for launching of separate department with dedicated faculty, labs, and governance.	depends on the university administration	Registrar Office VC office Department	This valuable suggestion is appreciated but due to a new setup of the university, available resources and lack of faculty, we cannot separate it at the moment. We have a plan to establish Faculty of Allied Health Sciences under which we will

	program as a separate department within the Faculty of Allied Health Sciences, with its own dedicated faculty, laboratories, and administrative framework. This structural autonomy will ensure regulatory compliance, strengthen academic oversight, and support targeted growth in diagnostic sciences education and research.				offer BS MLT and will also launch other Allied Health Sciences programs.
4	Faculty irrelevancy & shortage (only 2 MLT-qualified faculty). Finding: Out of eight current faculty members in the BS-MLT program, only two possess relevant MLT qualifications, while the rest have academic backgrounds in unrelated disciplines such as Botany, Biotechnology, and Chemical Engineering. This violates AHPC's requirement that at least 70% of faculty teaching in MLT programs must be discipline-relevant and registered with the Council. The shortage of qualified faculty compromises curriculum delivery, clinical training quality, and accreditation readiness. Recommendation: Recruit additional permanent or long-term contractual MLT-qualified faculty to meet AHPC's 70% relevancy threshold. Relocate core and specialized courses exclusively to MLT-qualified instructors and ensure all teaching staff are registered with AHPC. This will strengthen academic quality, enhance	The University is requested for hiring permanent faculty with relevancy and also for fall 2025 we have requested HR office for hiring 4 MLT based visiting faculty	Depending on the university hiring procedure	HR, Registrar Office	We have 5 faculty members (3 PhD and 2 with MS Degrees). Currently 3 of them have received their AHP Certificate from AHPC and 2 have applied for registration, who will receive their AHP Certificates soon. For Hiring more relevant Faculty, the department can request after higher authority advertise the positions.

	clinical competency among students, and safeguard the program's accreditation status.				
5	Specialized subjects assigned to non-MLT faculty. Finding: Several specialized and clinically focused subjects—such as Clinical Laboratory Management, Microbiology, Virology, and Molecular Biology—are currently being taught by faculty without MLT qualifications or relevant clinical laboratory experience. This practice undermines the technical depth, clinical accuracy, and professional applicability of course content, leading to gaps in student competency and misalignment with AHPC's faculty relevancy standards. Recommendation: Reassign all specialized and core clinical courses exclusively to MLT-qualified faculty with demonstrated expertise in the relevant subject areas. Implement a faculty allocation policy aligned with AHPC guidelines to ensure subject faculty relevancy and provide targeted faculty development programs to maintain up-to-date clinical and diagnostic knowledge.	We will assign specialized subjects such as Clinical Lab Management, Microbiology, Virology, and Molecular Biology to qualified MLT faculty and relevant degrees and experience.	Immediate. Starting from Fall 2025	Department	At the initial stage of program launch, the department faced certain constraints in faculty availability; however, this deficiency has now been effectively addressed. Currently, all major and specialized clinical courses are being taught by the most relevant and qualified MLT faculty members. Where required, subject experts have also been engaged on a visiting basis to ensure academic quality and subject relevancy.
6	Short-term contracts affect academic stability. Finding: A significant proportion of BS-MLT teaching staff are employed on short-	As per university policies, MLT teachers with contract have been given one year extension. Further	Depending on the university hiring procedure	Registrar, HR Department	The hiring process and conversion of contractual appointments into

	term contracts, often less than one year, which disrupts academic continuity, mentorship, and long-term program development. This instability negatively impacts curriculum consistency, student–faculty engagement, and the program’s ability to retain skilled educators. It also falls short of AHPC requirements that faculty be appointed on a permanent basis or on contracts of at least three years for accreditation compliance. Recommendation: Transition all MLT-qualified faculty appointments to permanent positions or minimum three-year contractual terms, in line with AHPC standards. Establish clear retention policies and professional development opportunities to encourage long-term commitment, ensure continuity in teaching quality, and foster stable academic leadership within the program.	decisions will be taken once posts are advertised.			permanent positions are carried out strictly in accordance with the directions of HED Punjab and other applicable government policies and regulations. Following the QEC meeting, the contracts of available MLT-qualified faculty members were extended for an additional year to ensure continuity, stability, and compliance with AHPC standards. The department remains committed to strengthening faculty retention, promoting professional development opportunities, and ensuring long-term academic continuity within the BS-MLT program, subject to
--	---	---	--	--	--

					government policy provisions.
7	Ineffective teaching methods (5-minute classes, student-led presentations without guidance). Finding: Certain specialized courses in the BS-MLT program are delivered through minimal in-class engagement, with some faculty conducting only brief sessions of a few minutes and relying heavily on unguided student presentations. This approach results in inadequate coverage of complex clinical content, inconsistent knowledge depth, and reduced student preparedness for professional practice. Such practices fall short of higher education teaching standards and compromise the integrity of course delivery. Recommendation: Implement structured teaching protocols requiring minimum contact hours, interactive lectures, guided presentations, and clear syllabus coverage. The QEC should regularly monitor teaching quality through class observations and student feedback, while faculty receive training in modern pedagogical strategies to enhance engagement, comprehension, and retention in clinically oriented subjects.	On students complains, some teachers were highlighted. Which were taken in serious considerations and teachers have not assigned courses.	Dully checked by the departmental head	Department	This concern was raised following feedback from a student regarding a specific faculty member. The matter was taken very seriously by the department. After due consideration, the concerned faculty member's contract was not extended, and she was relieved from her duties. To ensure improvement, all remaining faculty members were formally advised to strictly adhere to structured teaching protocols, including minimum contact hours, interactive lectures, guided presentations, and comprehensive syllabus coverage.

					Additionally, the Head of Department conducted regular follow-up and monitoring of classes throughout the last semester, which resulted in significant improvement in teaching quality and student satisfaction.
8	Lack of practical training and industry/laboratory exposure. Finding: The BS-MLT program currently lacks a structured and consistent framework for practical training, with limited opportunities for students to engage in real-world diagnostic laboratory activities. Reports indicate that qualified MLT faculty have been restricted from delivering scheduled hands-on sessions, and there are no formal linkages with hospitals or diagnostic laboratories for industry exposure. This deficiency hampers skill acquisition reduces clinical competence, and risks non-compliance with AHPC's experiential learning requirements. Recommendation: Develop and enforce a comprehensive practical training schedule conducted exclusively by MLT-qualified faculty. Establish formal Memoranda of	Teachers have been given strict instructions to ensure all practical sessions are conducted with relevant courses and we will establish MoUs with diagnostic labs/hospitals for regular visits; implement structured skill-based training schedule.	Monitored by the departmental higher authorities	Department	The department has already initiated corrective measures to strengthen practical training and laboratory exposure. A formal demand has been submitted to the University for the purchase of required instruments, equipment, and chemicals to upgrade laboratory facilities. This will significantly enhance the quality and frequency of hands-on practical sessions conducted under the supervision of

	Understanding (MoUs) with accredited diagnostic laboratories and hospitals to provide regular industry visits, internships, and skill-based workshops. Incorporating structured, supervised clinical exposure into the curriculum will bridge theory with practice and ensure graduates meet professional competency standards.				qualified MLT faculty. Furthermore, it is a departmental requirement that each BS-MLT student must complete a 6–8 week internship every year, particularly during winter vacations, in reputed hospitals, diagnostic laboratories, or research centers. These internships are arranged through formal recommendation and request letters issued by the department to relevant institutions, ensuring structured clinical exposure and experiential learning. The department is also working towards further strengthening structured practical schedules and
--	--	--	--	--	---

					exploring formal MoUs with accredited hospitals and diagnostic laboratories to ensure sustained industry linkage and full compliance with AHPC experiential learning standards.
9	Internal restrictions preventing practical delivery by qualified faculty. Finding: Qualified MLT faculty, despite being assigned practical sessions, have reportedly faced internal directives or pressure preventing them from conducting these essential training courses. Such restrictions create an environment of academic obstruction, deprive students of critical hands-on learning opportunities, and undermine the collaborative spirit required in professional education. This internal conflict compromises both program quality and compliance with AHPC's requirement for practical instruction by discipline-relevant faculty. Recommendation: Implement a clear institutional policy that safeguards the academic autonomy of assigned faculty to deliver practical sessions without interference. The Dean and HoD should mediate existing conflicts, ensure	Teacher have been assigned with responsibilities to conduct scheduled practical without obstruction; address internal conflicts through mediation.	Immediate	Department and faculty	We respectfully submit that this concern does not reflect the actual situation within the department and appears to have been inadvertently miscommunicated to the external members. There have been no institutional restrictions preventing qualified MLT faculty from conducting assigned practical sessions. The University maintains a clear administrative and academic hierarchy

	transparent faculty role assignments, and enforce accountability measures against obstruction of academic duties. Promoting a cooperative, student-centered teaching culture will strengthen skill-based learning and uphold professional standards.				with strict oversight from the Vice Chancellor to the Registrar, Dean, HoD, and faculty in-charge to ensure smooth academic functioning and accountability at all levels. Practical teaching responsibilities are formally assigned and monitored to maintain transparency and compliance with academic standards. Nevertheless, we appreciate the observation, as it has further enhanced our vigilance. The department remains committed to fostering a cooperative, student-centered academic environment and will continue to ensure that all assigned
--	---	--	--	--	--

					faculty can perform their teaching and practical duties without any obstruction.
10	No standardized thesis format or guidelines. Finding: The BS-MLT program lacks an approved, standardized thesis format and formal guidelines for undergraduate research projects. This absence leads to inconsistencies in research quality, formatting, and assessment, and creates uncertainty for both students and supervisors. Without a unified framework, the program risks variability in academic rigor and may fall short of institutional and AHPC expectations for structured scholarly work. Recommendation: Develop, approve, and disseminate a standardized thesis format and comprehensive research guidelines through departmental and QEC oversight. Publish these resources on the university's website and integrate orientation sessions for students and supervisors. This will promote uniformity, enhance research quality, and align undergraduate projects with national academic and professional standards.	The students of BS MLT have not yet reached to start their Final year projects, through BoS formats and credit hours related all matters of FYP have been approved and will be religiously followed.	From Fall 2025	Department	We respectfully clarify that at the time of the PREE meeting, the first BS MLT batch was in the 6th semester and had not yet commenced their Final Year Project/Thesis. Therefore, no undergraduate research submissions had been produced at that stage to reflect any inconsistency in format or structure. However, the department acknowledges the importance of a standardized and approved thesis format. Currently, the concerned students have

					initiated their research projects and are following the simplified version of the research thesis format already designed and approved for MS programs through BASR. This ensures uniformity in structure, formatting, supervision, and assessment.
11	Capstone projects supervised by non-MLT faculty. Finding: Capstone projects, which serve as a critical component of applied learning in the BS-MLT program, are in some cases supervised by faculty without MLT qualifications. This misalignment between supervisor expertise and project scope risks compromising the technical accuracy, clinical relevance, and diagnostic applicability of student research. It also detracts from the intended purpose of capstone work as a demonstration of professional competence in laboratory medicine. Recommendation: Assign all capstone and final-year projects exclusively to MLT-qualified faculty with expertise in the	Till now students have reached to 6 th semester and no student has yet strated Capstone or Final year projects. This point was probably confused with other departments.	Will be assigned to qualified faculty	Head of the department	We respectfully clarify that at the time this observation was raised, the BS-MLT students had not yet commenced their capstone/final year research projects. Therefore, no supervisory allocations had been formally made at that stage, and the basis for this concern appears to have been premature.

	relevant diagnostic discipline. Establish clear supervisory guidelines, assessment rubrics, and topic approval processes to ensure that projects align with clinical laboratory standards, AHPC requirements, and emerging trends in medical diagnostics.				Currently, as students have entered their research phase, supervision is being conducted under well-qualified, foreign-trained PhD faculty members with expertise in medical diagnostic and clinically relevant research areas. In certain cases, MS-qualified faculty members have been assigned co-supervisory roles; however, this has been done under the consultation, guidance, and oversight of senior PhD faculty to ensure technical accuracy, clinical relevance, and diagnostic applicability of the research work.
12	Inadequate classrooms and facilities. Finding: The BS-MLT program suffers from a shortage of classrooms and inadequate learning spaces, with existing	The university will try to provide upgrade and expand classrooms with proper ventilation, seating,	Depends on university support	VC, Registrar, Estates Department	We acknowledge the concern regarding classroom space and facility limitations.

	facilities lacking proper ventilation, seating capacity, and multimedia resources. These limitations hinder effective teaching, student engagement, and comfort, especially during peak academic periods. Recommendation: Expand and upgrade classroom infrastructure to meet student enrollment demands, ensuring ergonomic seating, adequate lighting, ventilation, and modern teaching aids. Prioritize these improvements in line with HEC and AHPC facility standards to create an environment conducive to academic excellence.	and multimedia equipment.			However, this issue is not specific to the BS-MLT program alone; rather, it is a broader institutional challenge currently faced by the University due to expanding academic programs and increasing student intake. The University administration is fully aware of the space and infrastructure constraints and is actively working on phased improvements to enhance classrooms, ventilation, seating arrangements, and multimedia resources. With ongoing development plans and future infrastructure expansion, these challenges are
--	--	---------------------------	--	--	---

					expected to be progressively resolved.
13	No departmental library with MLT-specific books. Finding: The BS-MLT program currently lacks a dedicated departmental library, and the central library does not have adequate MLT-specific textbooks, journals, or reference materials. This scarcity limits students' access to updated scientific literature, hinders self-directed learning, and weakens research capacity. Recommendation: Establish a departmental library equipped with current MLT textbooks, diagnostic manuals, and peer-reviewed journals. Ensure periodic updates to the collection and provide both print and digital resources to align with AHPC standards and support evidence-based learning.	University has been requested to establish departmental library stocked with current MLT textbooks and journals.	University decision	Provost Office/Campus Incharge	While there is no separate departmental library, a request has been forwarded to the central library for procurement of updated MLT specific textbooks and reference materials. The department is also compiling a recommended book list to strengthen available academic resources and support student learning and research activities.
14	Poor internet and no e-library access. Finding: Students and faculty in the BS-MLT program face persistent internet connectivity issues, compounded by non-functional access to the university's e-library system. This severely restricts access to updated scientific literature, online journals, and research databases, thereby limiting opportunities for evidence-based learning	University has been requested to upgrade campus internet; restore e-library system and conduct student training sessions.	Depends on the university actions	IT Department, / Campus Incharge	The issue of internet connectivity and e-library access is a broader institutional matter and has been communicated to the University administration. Efforts are underway

	and scholarly engagement. Recommendation: Upgrade campus internet infrastructure to provide stable, high-speed connectivity and restore full access to the e-library platform. Conduct orientation sessions on effective use of e-resources, ensuring that both students and faculty can utilize digital tools to enhance teaching, learning, and research productivity.				to improve internet infrastructure and restore full functionality of e-library services to ensure uninterrupted access to scientific literature and research databases.
15	Lack of drinking water, toilets, and common rooms. Finding: Basic student amenities in the BS-MLT program are inadequate, with no reliable access to clean drinking water, hygienic toilets, or a designated common room—particularly affecting female students' comfort, privacy, and well-being. Such deficiencies negatively impact the learning environment and fall short of institutional responsibilities under HEC and AHPC standards. Recommendation: Install water filtration units, renovate and maintain separate male and female washrooms, and establish a well-equipped common room for female students. These facilities should be regularly monitored to ensure cleanliness, accessibility, and a supportive academic atmosphere.	University has been requested to install water filtration units, renovate restrooms, and establish common room for female students.	Depending on the university actions	Registrar Office/PD Office /Campus Incharge Department	These facilities fall under central university management rather than the department alone. The matter has been formally conveyed to the relevant administrative offices for necessary action. The University is gradually improving student amenities to ensure compliance with HEC and AHPC standards.
16	Unawareness of scholarships and grievance redressal system.	University has been requested to conduct	Immediate	Student Affairs, Department	The University has now initiated steps to

	Finding: Many BS-MLT students are unaware of the scholarships available to them and the procedures for lodging academic or administrative complaints. This lack of awareness limits access to financial support, discourages reporting of grievances, and undermines trust in institutional support mechanisms. Recommendation: Conduct regular orientation sessions and publish accessible information on scholarships, grievance redressal procedures, and relevant contacts through the departmental notice board, official website, and student handbooks. Ensure that these systems are transparent, well-publicized, and actively monitored for responsiveness.	orientation sessions on scholarships, grievance mechanisms, AHPC registration, and anti-harassment cell.			improve student awareness by sharing scholarship information and grievance redressal procedures through orientation sessions, official notices, and class briefings. Students are being guided about available financial support schemes and proper complaint mechanisms to ensure transparency and institutional trust.
17	No training in digital library usage. Finding: Students in the BS-MLT program have not received any formal orientation or training on how to access and utilize the university's digital library resources. This gap restricts their ability to retrieve scientific literature, reference materials, and research databases, thereby limiting independent study and evidence-based academic work. Recommendation: Organize periodic hands-on training sessions on digital library access and search strategies, led by the library staff in collaboration with the HoD. Provide user guides and online tutorials to	University has been requested to organize digital library orientation for students and faculty.	Session will be organized from help of library and IT department	Library Department, IT department	The department plans to coordinate with the library administration to arrange an orientation session on digital library usage and research database access. This will enhance students' ability to retrieve scientific literature and strengthen evidence-based learning.

	ensure students can efficiently navigate and utilize digital resources for coursework, research, and professional development.				
18	Declining student admissions. Finding: The BS-MLT program has experienced a gradual decline in student admissions, which may be attributed to perceived academic quality issues, limited facilities, insufficient industry linkages, and inadequate promotional outreach. This downward trend threatens the program's sustainability, visibility, and ability to attract high-caliber candidates. Recommendation: Enhance the program's academic quality through curriculum strengthening, improved infrastructure, and compliance with AHPC standards. Implement targeted outreach campaigns, showcase alumni success stories, and establish partnerships with healthcare institutions to rebuild the program's reputation and increase enrollment.	The department is trying to strengthen academic standards, facilities, and marketing efforts to attract quality students.	Admission Committee	Admissions Office/ Department	It a regional issue, not specific to our program but anyhow measures are being taken to improve and increase promotional outreach through academic activities and awareness campaigns. These steps are expected to positively impact future admissions and program sustainability.
19	Non-registration of students with AHPC at enrollment. Finding: Newly admitted BS-MLT students are not being registered with the Allied Health Professionals Council (AHPC) at the time of enrollment. This oversight risks delays or complications in obtaining professional licensure upon graduation,	Department will ensure all students are registered with AHPC upon admission; maintain updated records.	Immediate	Department	Necessary coordination with AHPC is being initiated to streamline the process of student registration at the time of enrollment to

	potentially affecting employability and compliance with national regulatory requirements. Recommendation: Implement a mandatory AHPC registration process for all BS-MLT students during initial enrollment. Maintain an updated departmental register of student AHPC IDs and coordinate closely with the Council to ensure timely verification and certification in line with accreditation standards.				avoid future licensure delays and ensure full compliance with national regulatory requirements.
HoD's Comments: The department sincerely appreciates the QEC's constructive feedback and recommendations. We are committed to addressing all observations through ongoing curriculum enhancement, infrastructure improvement, faculty development, and strengthened industry linkages, ensuring that the BS-MLT program fully meets AHPC standards and provides a high-quality, student-centered learning environment.

Quality Enhancement Cell (QEC)

Dated: 05th August, 2025

PREE Implementation Plan (Department of Sociology)

Sr. No.	AT findings and recommendations	Intended Corrective Actions	Intended Implementation Period	Responsible Body	Resources Needed	Compliance status	Documentary evidence
1	▪ Program Mission, Objectives, and Learning Outcomes There is misalignment of Departmental Vision and Mission with the university's strategic direction. Program Objectives are outdated and there is misalignment between Program Objectives and Learning Outcomes (CLOs, PLOs, PEOs). PEOs are generic, lacking measurable outcomes.	The revision process has been initiated, and a review committee will be formed to ensure full alignment. The updated statements will be finalized in collaboration with all stakeholders and formally approved to maintain strategic coherence with the objectives of Kohsar University Murree.	6 month	HoD, Departmental Curriculum Committee	Meeting sessions, faculty input	To ensure full alignment, the revision process has been initiated through the establishment of a dedicated review committee. the updated statements will be finalized and formally approved, thereby maintaining	

						strategic coherence with the objectives of Kohsar University	
2	▪ Curriculum Design and Organization There is no AI-Based Courses integrated into the curriculum. Research Components (e.g., Thesis, Projects) are not officially included in BoS proceedings or communicated to students in advance. The curriculum lacks alignment with contemporary sociological trends and interdisciplinary integration.	AI-based courses will be integrated into the curriculum, and research components (thesis/projects) will be formally included in BoS proceedings and clearly communicated to students. Additionally, the curriculum will be revised to align with contemporary sociological trends and promote interdisciplinary integration.	6 month	Departmental BOS	Faculty input, expert review	To align with contemporary sociological trends and foster interdisciplinary integration, the curriculum will be revised to include AI-based courses. Furthermore, research components (thesis/projects) will be formally incorporated into BoS proceedings and transparently communicated to students.	
3	▪ Subject-Specific Facilities There is a limited number of sociology-related books available in library. There is no dedicated	The department will expand the sociology section in the library by acquiring more relevant books and journals while	6 month	KUM university	Faculty workshops, OBE	The department will strengthen student resources by expanding the library's sociology	

	computer lab, which restricts access to essential digital tools for research, data analysis, and academic work.	establishing a dedicated computer lab equipped with digital tools for research and data analysis. These measures will ensure students have adequate resources for academic and research needs.				collection with relevant books and journals, alongside establishing a dedicated computer lab featuring digital tools for research and data analysis. These initiatives will adequately support students' academic and research needs	
4	▪ Student Advising and Counseling There is absence of Student Support Committees for counseling, and career guidance. There is lack of formal handbooks for students and faculty. Providing these support systems fosters a student-centered learning environment and aligns with QA best practices.	Student Support Committees will be established to offer counseling and career guidance, along with the development of formal handbooks for students and faculty. These initiatives will enhance student support services and ensure alignment with quality assurance best practices.	3 month	Department of Sociology	Meeting sessions, faculty input	The establishment of Student Support Committees offering counseling and career guidance, coupled with the development of formal handbooks for students and faculty, will enhance support services and ensure compliance with quality	

						assurance best practices.	
5	▪ Faculty and Support Staff No Faculty Handbook is available. There is need for faculty development, particularly in integrating technology (e.g., AI) and modern teaching strategies. Effective faculty orientation and development are essential for curriculum continuity, quality instruction, and professional growth.	A comprehensive Faculty Handbook will be developed, and targeted training programs will be introduced to enhance technological integration (including AI) and modern pedagogical approaches. These measures will ensure curriculum consistency, teaching excellence, and continuous faculty development.	6 month	Department of Sociology	Faculty input, expert review	Formal approval of the department's Vision, Mission, and Strategic Plan will be obtained through relevant academic bodies, complemented by the development of a Departmental Strategic Plan to steer long-term objectives. Additionally, transparent communication channels for thesis and research requirements will be created, supported by a structured policy for integrating research	

						components into the BoS agenda.	
6	Institutional Policies and Process Control Vision, Mission, and Strategic Plan needs formal documented approval through relevant academic bodies. The Departmental Strategic Plan is absent, limiting long-term planning. There is no clear communication mechanisms regarding thesis/research requirements for students. There is no established policy for integrating research components into the BoS agenda.	The department will formalize and obtain documented approval for its Vision, Mission, and Strategic Plan through the appropriate academic bodies, while also developing a Departmental Strategic Plan to guide long-term objectives. Additionally, clear communication channels for thesis/research requirements will be established, along with a structured policy for incorporating research components into the Board of	3 month	Department of Sociology BOS	Faculty workshops, OBE	To guide long-term objectives, the department will formalize and secure approval for its Vision, Mission, and Strategic Plan from appropriate academic bodies, while also developing a Departmental Strategic Plan. Furthermore, clear communication channels for thesis and research requirements will be implemented, along with a structured policy for including research components in the Board of Studies agenda.	

		Studies (BoS) agenda.					
7	▪ Institutional Support and Learning Resources There is absence of institutional collaborations and MOUs with relevant organizations for research and training. There is lack of digital infrastructure and access to online platforms/resources. The course folders lack proper documentation, affecting academic audit readiness. There is absence of Student Handbook too.	The department will establish institutional collaborations and MOUs with relevant organizations to strengthen research and training opportunities, while upgrading digital infrastructure and online resource access. Additionally, standardized course folder documentation and a comprehensive Student Handbook will be developed to ensure academic audit readiness and student support.	6 month	Department of Sociology	Meeting sessions, faculty input	Program relevance will be enhanced by including industry experts in the Board of Studies, supported by a structured developmental plan for institutional partnerships, curriculum updates, and community engagement. Continuous improvement of academic standards will be ensured through systematic reviews of assessment	

						practices, teaching quality, and faculty roles.	
8	▪ Institutional General Requirements There is lack of industry representation in Board of Studies (BoS). Absence of developmental planning for institutional partnerships, curriculum revision, and community engagement is creating problems. Institutional effectiveness depends on robust stakeholder engagement, strategic planning, and continuous quality enhancement. Overall academic standards require a systematic review, including assessment practices, teaching quality, and faculty roles.	Industry experts will be included in the Board of Studies (BoS) to enhance relevance, while a structured developmental plan will be implemented for institutional partnerships, curriculum updates, and community engagement. These measures will strengthen academic standards through systematic reviews of assessment practices, teaching quality, and faculty roles to ensure continuous improvement.	6 month	Department of Sociology	Faculty input, expert review	Program relevance will be enhanced by including industry experts in the Board of Studies, supported by a structured developmental plan for institutional partnerships, curriculum updates, and community engagement. Continuous improvement of academic standards will be ensured through systematic	

						reviews of assessment practices, teaching quality, and faculty roles.
